Supervisor: Dr First A. Supervisor

August 2026

This thesis is submitted in partial fulfilment of the
requirements for the degree of MSc.

© 2026. All rights reserved. No part of this publication
may be reproduced without the written permission of
the copyright holder.

**(NB. Please refer to the Intellectual Property Policy, for full details on intellectual
property and copyright ownership; see also guidance in Section 2.5.)**

Academic Integrity Declaration

I declare that:

- the thesis submitted has been written by me alone.
- the thesis submitted has not been previously submitted to this university or any other.
- that all content, including primary and/or secondary data, is true to the best of my knowledge.
- that all quotations and references have been duly acknowledged according to the requirements of academic research.

I understand that to knowingly submit work in violation of the above statement will be considered by examiners as academic misconduct.

Abstract

Replace with your abstract text of not more than 300 words.

(NB. If the thesis covers work sponsored by an external body, the name of the sponsor/funding body and the grant number/funding code should be included directly after the abstract.)

Keywords:

Enter at least 6 keywords (not contained within the thesis title).

Acknowledgements

This section is not mandatory, but you may wish to acknowledge the support or contributions of other people who have helped with your thesis or with your studies in general.

The author would like to thank Prof. Daniel Auger for his work in previous versions of this template and for testing this version, and Dr Irene Moulitsas and Dr Stephanie Burrows for testing this version.

Chapter 1

Introduction

This guide/template and the associated style file were written to guide Cranfield students in writing a thesis using the $\text{\LaTeX}$ system so as to closely mimic the University's Microsoft Word Thesis Template available from [1].

From the Intranet [1] you should be able to download a zip file containing:

- `CUThesis2026.sty` - a $\text{\LaTeX}$ style form that correctly formats your thesis and provides some useful commands.
- `CUThesisTemplate2026.tex` - a $\text{\LaTeX}$ source file used to produce the pdf file you are now reading.
- `CULogo.png` - a png image file for the Cranfield logo used on the first two pages of the thesis.
- `PartnerLogo.png` - a sample png image file for a partner organisation.
- `FigureExample.png` - a sample image to include in the body of the thesis.
- `Latex.bib`, `CU-Templates.bib` and `CU-Referencing.bib` - three BibTeX source files containing bibliographic data for the citations I have made in this document.

Minor guidance content modifications were completed in June 2026 by Dr Stephanie Burrows.

The most recent major version of the template and style file have been tested as follows:

- the author, using the $\text{\LaTeX}$ package `texlive` 2024 [2] updated in January 2025 under Windows 64.
- Prof. Daniel Auger and Dr Stephanie Burrows using MiKTeX/TeXworks [3] installation on a Cranfield-maintained Windows PC
- Dr Irene Moulitsas on MacOS using 3 different environments:
 - TexShop 5.48 (latest 2025) [4]

- TeXworks 0.6.9 (latest 2024) [3]
- TeX Live 1.54 (circa 2023) [2]

1.1 Instructions

I would recommend:

1. Downloading and unzipping the zip file from the Intranet [1].
2. Copy the folder and contents to a new folder (so you keep the original and this document).
3. In the new folder, compiling the template as follows:

```
pdflatex CUThesisTemplate2026  
bibtex CUThesisTemplate2026  
pdflatex CUThesisTemplate2026  
pdflatex CUThesisTemplate2026
```

This should recreate this pdf document you are reading.

4. You should now be able to start editing the document to become your own thesis.
5. If above fails seek help from a colleague or your supervisor who know more about $\text{\LaTeX}$ than you!

Shaun Forth 22nd January 2025.

Minor updates by Stephanie Burrows 11th June 2026.

Chapter 2

Guidance

You may wish to save a copy of the template document with this guidance intact for ease of reference. You can also find this guidance and links to training and support resources on the digital skills hub.

2.1 Formatting requirements for your thesis

2.1.1 Mandatory formatting requirements

The following requirements are mandatory for the formatting of your thesis. They are built into this template.

- 3cm margins on all four sides.
- Page numbers and any headers or footers should appear within the set margin areas in the template.
- Any font is acceptable, as long as it is clear and legible. A sans-serif font is recommended. See comments near the beginning of this file for instructions on how to switch to a serif font, if desired.
- The main body of the text must be 12pt in size, but captions can be smaller, and headings can be larger.
- Pages must be numbered consecutively. If you wish, you can use Roman numerals for the introductory pages which precede the first chapter.

2.1.2 Recommended formatting requirements

- Standard A4 printer paper is advised.
- 1.5 spacing is easier for your examiner to read.

- There is no requirement to use running headers or footers for chapter headings or for the thesis title, but you may do so if you wish.

2.2 Basic Document Structure using L^AT_EX

2.2.1 Chapters

For Chapter Titles use `\chapter{chapter title}` and add an optional `\label{label_name}` for ease of referencing. For example, I have inserted `\label{chap:Guidance}` for easy cross-referencing to Chapter 2 (using `\refChap{chap:Guidance}`) as I shall explain in Sec. 2.2.5.

My use of label names, such as `chap:Guidance` (and later `sec:SectionHeading`, `fig:FigureExample`, etc.), is personal preference. The `chap:`, `sec:`, `fig:`, etc. prefix just make the labels for chapters, sections, etc. easier to find when searching the L^AT_EX file.

Try to get in the habit of inserting labels for chapters, sections, etc., by default.

2.2.2 Section heading

For section headings use `\section{section name}` and add an optional `\label{label_name}` for easy cross referencing.
e.g. `\label{sec:SectionHeading}`.

2.2.3 Subsection heading

For subsection headings use `\section{subsection name}` and add an optional `\label{label name}` for easy cross referencing. e.g. `{sec:SubsectionHeading}`.

2.2.4 Subsubsection heading

For subsubsection headings use `\section{subsubsection name}` and add an optional `\label{label name}` for easy cross referencing.
e.g. `{sec:SubsubsectionHeading}`.

2.2.5 Referring to headings

Avoid referring to other parts of your document using phrases such as “*as described below*” (unless on the same page, this could be anywhere in the rest of the thesis) or “*as described previously*” (this could be anywhere from the start of the thesis to this point). Instead make use of the chapter and section labels to

point the reader directly to the appropriate part of the thesis. This is called *cross-referencing*.

Command `\refchap{label name}` has been defined to make it easy to cross-reference chapters. Similarly, `\refsec{label name}` is used to cross-reference section, subsection and subsubsection numbers. These commands should be used when the cross-reference occurs mid-sentence to facilitate their abbreviation. For example, to produce

In Chapter 2 we provide guidance on formatting your thesis including, in Sec. 2.2.2, section headings.

use:

In `\refchap{chap:Guidance}` we provide guidance on formatting your thesis including, in `\refsec{sec:SectionHeading}`, section headings.

At the start of sentences use commands `\refChap{label name}` and `\refSec{label name}` to ensure abbreviations for Chapter and Section are not used. For example,

Chapter 2 provides guidance on formatting your thesis. Section 2.2.2 covers section headings.

is produced using

`\refChap{chap:Guidance}` provides guidance on formatting your thesis.
`\refSec{sec:SectionHeading}` covers section headings.

At the time of writing, `\refChap` and `\refchap` produce the same output, but both are included for completeness and in case guidance changes in the future.

2.3 Chapter and Section Page Breaks

Use of the `\chapter` command will automatically start a new page. Use of `\section`, `\subsection` and `\subsubsection` will not. If a page break is desired for improved formatting (e.g. a section title appears as the last line on a page and its text appears on the next), then use `\pagebreak` to force a new page where you need it.

2.4 The Title Pages

The two title pages and the *Academic Integrity Declaration* are created using the `\maketitle` command. However, information for the title pages is **set in the preamble** (before `\make{document}`) using various commands. Title, author and date are set using the standard $\text{\LaTeX}$ commands `\title`, `\author` and `\date`. Other commands are included by `CUThesis2026.sty` as we now detail.

2.4.1 Supervisors

If there is a single supervisor (plus one or more associate supervisors - see Sec. 2.4.2) then use `\supervisor`,

```
\supervisor{Dr First A. Supervisor}
```

But, if there are two or more then use `\supervisors` with appropriate use of and, commas, or `\\` (for a line break) to separate them,

```
\supervisors{Dr First A. Supervisor and Prof Second Supervisor}
```

or,

```
\supervisors{Dr First A. Supervisor, Prof Second Supervisor\\  
and Third Supervisor}
```

You must set either the supervisor or supervisors.

2.4.2 Associate Supervisors

If there is a single associate supervisor then use `\associatesupervisor`,

```
\associatesupervisor{Dr Associate Supervisor}
```

But, if there are two or more then use `\associatesupervisors` with appropriate use of and, commas, or `\\` (for a line break) to separate them,

```
\associatesupervisors{Dr Associate Supervisor and Prof. Yet Another}
```

If you do not set the associate supervisor(s) then nothing is displayed.

2.4.3 Faculty

Use command `\faculty` to set your Cranfield Faculty of study. There are predefined commands for both of our two faculties. So you might use:

- `\FEAS` for the Faculty of Engineering and Applied Sciences,
- `\FBAM` for the Faculty of Business and Management.

The obsolete `school` command, e.g.

```
\school{\CDS}
```

should not be used, but will insert the appropriate faculty.

2.4.4 Course

Taught course students should use the command `\course` to set their course title. e.g.

`\course{Defence Simulation and Modelling}`

Research students should not set the course (if the course is not set then no course title is written). Please **do not** set an empty course (`\course{}`) as this causes a $\text{\LaTeX}$ error that I don't have the time or energy to eliminate.

2.4.5 Degree

Command `\degree` is used to set your degree of study.

For taught programmes [5] this should be one of

- MSc
- MBA
- MTech
- MRes
- MDes
- PgDip
- PgCert

For research programmes [6] this should be one of

- PhD
- Executive DBA
- EngD
- MPhil
- MSc by Research

For example,

`\degree{MSc}`

2.4.6 Academic Year

Aside from the usual `\date` which should be used to supply the month and year of your thesis submission, you should also use `\academicyear` to supply the academic year. For example,

`\academicyear{2022--2023}`

2.4.7 Fulfilment

By default the statement,

This thesis is submitted in partial fulfilment of the requirements for the degree of ...

is added to the second title page. This should be removed for degrees assessed entirely by the thesis, such as a PhD, by using the command,

```
\fulfilment{}
```

in the preamble.

2.4.8 The Cranfield University logo and co-branding

It is preferred that the Cranfield University logo is positioned at the top of the cover and title pages of the thesis document. The logo image files is provided as `CULogo.png` with this template and included by default. (It can also be specified using the command `\setCULogo`.)

If it is not appropriate to show the Cranfield University logo, then it can be removed and replaced by the text as described in Sec. 2.4.9.

If you are working with a partner on the research included in this thesis document, you may, subject to their approval, also include their official logo as co-branding on the cover and title pages. Guidance is provided in Sec. 2.4.10.

2.4.9 Using Cranfield University text in place of a logo

If appropriate you may remove the Cranfield University logo from the cover and title pages of the thesis and in its place use the text “CRANFIELD UNIVERSITY”.

To remove the Cranfield logo issue the command

```
\setCUTextLogo
```

2.4.10 Adding a partner logo

Before using a partner logo in this document you must:

- obtain permission from the partner to use their logo in this document.
- obtain a high-resolution logo from the organisation – do not take a screen-shot from the website.

To add the partner logo as co-branding use

```
\setCUPartnerLogo{PartnerLogo}{Partner's Logo}
```

where `PartnerLogo.png` or `PartnerLogo.jpg` is the graphics file containing your partner's logo. A dummy `PartnerLogo.png` is supplied with this template. The text "Partner's Logo" is used as alternative text for a screenreader, to enable accessibility.

The Partner Logo is automatically scaled to be the same width as the CU Logo. This might not be appropriate if the logo is wider than tall. In that case experiment with the command `\setCUPartnerLogo` in the style file `CUThesis2026.sty`. You may wish to consult [7, 8] for support in doing so.

2.5 Copyright

For further details on the intellectual property and copyright ownership, please refer to the Intellectual Property Policy, CU-RIO-POL-5.0, Section 2 and Section 5.

MOD-sponsored student theses will usually be Crown Copyright and should include the copyright statement below (Section 5 of the Intellectual Property Policy refers).

© Crown Copyright, 20XX. All rights reserved. No part of this publication may be reproduced without the written permission of the copyright holder.

Students sponsored by other employers or funders may also have different copyright statements.

2.5.1 Assigning Copyright within the L^AT_EX thesis template

By default, only the year is displayed, as copyright remains with the student, who is the author of the document. The copyright year must be supplied: this will be the same as the year of submission. For example,

```
\copyrightyear{2023}
```

A different copyright holder can be specified as follows:

- For MOD-sponsored students:

```
\copyrightholder{Crown Copyright}
```

- To assign copyright to Cranfield University:

```
\copyrightholder{Cranfield University}
```

- Other copyright holders may be assigned in a similar way.

Please note that instructional text has been added to the cover page regarding intellectual property and copyright ownership. This may be removed from the cover page by commenting out the line beginning

`\copyrightinstructions`

near the beginning of the `CUThesisTemplate2026.tex` document.

2.6 Inserting captions in the main document

Captions should be used whenever you insert a graphic or table. Use the `\caption` command to create the caption and add a `\label` for cross-referencing.

2.6.1 Figures - graphs, photos, diagrams

A $\text{\LaTeX}$ `\figure` environment should be used to insert graphs, photos and diagrams - here I'm also using them for $\text{\LaTeX}$ code listings (an alternative would be to set up a new environment for listings and use a better $\text{\LaTeX}$ package for displaying it [9, 10, 11]). The caption should be placed below the figure. An example is shown in Fig. 2.1. This was coded using the following:

Figure 2.1: A figure caption

```
\begin{figure}[ht]
\begin{center}
\includegraphics[width=0.8\textwidth,
alt={A photograph of a camera, used as an example for the template.}]
{FigureExample}
\end{center}
```

```
\caption{A figure caption}
\label{fig:FigureExample}
\end{figure}
```

Note the figure placement options `[ht]` to place the figure as best as possible either (`h=`) here (at the place where coded) or at the (`t=`) top of the page. Otherwise it will be placed on the following page.

Please use `alt` to include alt-text, which provides a description of the image for the screenreader. This enables the creation of an accessible document.

If you wish to include sub-figures, that is two or more graphs, photos or diagrams alongside each other with the same main caption then consider using the `subfigure` package [12]

2.6.2 Tables

A $\text{\LaTeX}$ `\table` environment should be used to insert tables, with the table itself generated using the `\tabular` environment. An example is shown in Tab. 2.1. The caption should be placed above the table. The coding to achieve this is:

Table 2.1: A table caption

	Heading	Heading
Label	Detail	Detail
Label	Detail	Detail

```
\begin{table}[ht]
\caption{A table caption}
\begin{center}
\tagpdfsetup{table/header-rows={1}}
\begin{tabular}{l|l|l}
& Heading & Heading \\ \hline
Label & Detail & Detail \\
Label & Detail & Detail \\ \hline
\end{tabular}
\end{center}
\label{tab:TableExample}
\end{table}
```

The

```
\tagpdfsetup{table/header-rows={1}}}
```

command provides accessibility support so that the table is appropriately interpreted by the screenreader.

2.6.3 Equations

Equations with labels are easily coded in L^AT_EX using the `\equation` environment and `\label` command,

$$A = \pi r^2. \quad (2.1)$$

This is coded as

```
\begin{equation}
A=\pi r^2. \label{eq:circlearea}
\end{equation}
```

Remember to punctuate your equation with a period if it ends a sentence.

Equations should only be labelled if they are cross-referenced later. Use `\[. \]` for an unlabelled equation,

$$A = \pi r^2.$$

For derivations it is often useful to use the `eqnarray` environment. For example, multiplying out a quadratic,

$$\begin{aligned} y &= (x-3)(x+4) \\ &= x^2 + x - 12 \end{aligned} \quad (2.2)$$

with `\nonumber` used to label constituent equations that do not need labelling. This is coded as

```
\begin{eqnarray}
y&=&(x-3)(x+4) \nonumber\\
&=&x^2+x-12 \label{eq:quadratic}
\end{eqnarray}
```

2.6.4 Referring to captions for figures, tables etc.

We can reference figures, tables and equations using supplied `\refFig`, `\reffig`, `\refTab`, `\reftab`, `\refEqn` or `\refeqn` according to what we are referencing, and whether we are doing so at the start of a sentence or not. Here are some examples:

- Table 2.1 at start of a sentence

```
\refTab{tab:TableExample} at start of a sentence
```

- Within sentence reference to Tab. 2.1

```
\item Within sentence reference to \reftab{tab:TableExample}
```

- Equation (2.2) at start of a sentence

```
\refEqn{eq:quadratic} at start of a sentence
```

- Within sentence reference to (2.2)

```
\item Within sentence reference to \refeqn{eq:quadratic}
```

2.6.5 Updating Tables of Contents, Lists of Figures and Labels

The information for contents, figures, tables and labels and cross-referencing for $\LaTeX$ are enabled using various files: `.toc` (table of contents), `.lof` (list of figures), `.lot` (list of tables), `.aux` file. E.g. for this $\LaTeX$ file

`LaTeX_Thesis_Template.toc`,

`LaTeX_Thesis_Template.lof`, `LaTeX_Thesis_Template.lot` and

`LaTeX_Thesis_Template.aux` are created. The labels, captions, etc. are written to these files when a command such as `\chapter` or `\label` during processing of the $\LaTeX$ file (e.g. when running `pdflatex`). The labels, chapter names, etc. are also read from this file to generate the table of contents, list of tables, and cross-references. As a result you will need to process the file at least twice to get the table of contents, list of tables and cross-references correctly updated.

Sometimes these files may get corrupted if the labels, chapter names etc are not correctly coded. In this case you will need to remove the `.toc` (table of contents), `.lof` (list of figures), `.lot` (list of tables), `.aux` files. There is often a simple menu option to do this if using $\LaTeX$ through a GUI tool such as `TeXworks` for which the drop down *File – Remove Aux Files ...* may be used.

2.7 Inserting Landscape Pages

It is often preferable to use a landscape page to display tables of data, charts or diagrams.

Figure 2.2: A figure on a rotated page caption

This is most easily done by using the `lscape` package [13] and placing the $\text{\LaTeX}$ source for the content to be created with the `landscape` environment.

```
% preamble
% :
\usepackage{lscape}
%
\begin{document}
% :
\begin{landscape}
% source for landscape material
\end{landscape}
```

Chapter 3

Referencing

The University specifies that you should use the APA7 Author-Date [14] or the Cranfield Numbered [15] citation styles as advised by your course director or supervisor.

You may wish to do your own research into choosing an appropriate bibliography style and how to use this within $\text{\LaTeX}$, but just as a start, guidance for switching to the APA referencing style is provided.

Essentially, you need to uncomment the following line in the preamble of this document:

```
\usepackage{apacite}
```

and then swap the bibliography style in the reference section to the following:

```
\bibliographystyle{apacite}
```

Be aware that you will likely need to remove all of the “Aux Files” (all the additional files that are created along with the final PDF document) in the current folder in order to get this to compile properly. It may not be enough to use the Remove Aux Files... option from within the file menu within TeXworks (if this is what you’re using) - you may well need to manually remove all of these files and start compilation from scratch.

Generally we only include *References* (books, articles, etc. we have referenced in the body of the thesis) in scientific and engineering theses. If you also need a *bibliography* (books, articles, etc., useful in your background research but unreferenced in the body of the thesis) then you’ll need to research this and report back to me!

3.1 Guidelines for referencing potentially sensitive information

Consider whether documents you are using could potentially contain commercially sensitive information. If in doubt always check with the source organisation (or its successor, if it is no longer in existence) on what you can do with them; and where you do want to use them, what conditions the document owner wishes to apply.

If you are involved in classified research it is important that you don't cite documents without first checking whether they can be referenced. If they are referenced you must ensure that the classification of your own thesis should be at least at the same security level. If you have any doubt or concern about citing a source, please check with your supervisor and/or Library staff.

Chapter 4

Dealing with chapters whose chapter name is ridiculously long and so spoiling formatting

Apart from new chapter pages, the style file automatically uses the current chapter and section names for the left and right headers of the pages of the main body. This can cause problems if the chapter or section names are too long. To cope with this, when you define the new chapter, also define a shortened chapter name in square brackets, as we have for this chapter,

```
\chapter[Dealing with long chapter names]{Dealing with chapters whose  
chapter name is ridiculously long and so spoiling formatting}
```

Section 4.1 shows how to do this for sections.

Note that the short chapter and section names are also used in the table of contents so try to avoid long names if possible.

4.1 Dealing with sections whose section name is ridiculously long and so spoil formatting

Please avoid long section names. If you must have them then it's advisable to provide a short section name

```
\section[Dealing with long section names]{Dealing with sections whose  
section name is ridiculously long and so spoil formatting}
```

Appendix A

Ethical Approval Letter

05 June 2026

Dear Researcher,

Reference: CURES/67890/2026

Project ID: 12345

Title: Full Title of Individual Research Project or Thesis

Thank you for your application to the Cranfield University Research Ethics System (CURES).

We are pleased to inform you your CURES application, reference CURES/67890/2026 has been reviewed. You may now proceed with the research activities you have sought approval for.

If you have any queries, please contact CURES Support.

We wish you every success with your project.

Regards,

CURES Team

Appendix B

Ethical Approval Guidance

Insert your ethical approval letter as the first appendix, i.e. Appendix A. The letter is emailed to you following CURES approval.

All research must have appropriate ethical approval before data collection commences.

B.1 Taught students

If you have not gained ethical approval or cannot provide confirmation of ethical approval your thesis will not be marked. This may result in award failure. Non-approval will be escalated to the Research and Innovation Office. This is in accordance with Section 10.2 of the Senate Handbook Managing Postgraduate Taught Courses.

B.2 Research students

Retraction of thesis - In accordance with section 12.3 of the Senate Handbook Managing Research Students, exceptionally, a supervisor may hold the view that the quality of the thesis falls considerably short of the required standard, or may have concerns that the thesis does not meet the expected standards relating to ethics or academic integrity.

In such cases, a supervisor may request that the relevant Director of Research authorises the retraction of a thesis. The Director of Research will, following discussion with the supervisor, review with the research student the issues raised and determine whether the thesis is retracted formally or whether the examiners should be instructed to proceed with the examination arrangements.

B.3 Including the letter via L^AT_EX

The letter may be include in the thesis document using the following commands:

```
\includegraphics[width=\textwidth, trim={20 300 20 15}, clip,  
alt={The ethical approval letter from the CURES system.}]  
{Letter.pdf}
```

A placeholder has been placed in Appendix A. You can adjust the `trim` option values to ensure all of the text in the letter is included, without the text becoming too small to read. Suggested values are given for the placeholder, but your letter might vary from this.

Appendix C
